Ancestor-Loss-Coefficient:

AVK3: 100
 AVK4: 100
 AVK5: 80.65

Explanations:

The ancestor-loss-coefficient indicates, how many of the possible ancestors of a dog are present.

Example: Within three generations there are 14 ancestors possible (2 parents + 4 grandparents + 8 great-grandparents),

if one dog appears twice in the ancestor's table we calculate like this:

AVK3 von 13 / 14 * 100 = 92,86

If an ancestor is not present in our database we assume that this animal is not present otherwise in the table. It is thus calculated in favor of the animal.
