		<p>Amoradas Rabaldra Til</p>	<p>Sikandi Aussie Bear</p>				

Kloofbear
Colour:SW
Offspring:16
Hips:good
ED:normal
OCD:N/A
Heart:normal-cardiologist

C.:SWmB, O.:139
HD:A, ED:N/A, OCD:N/A

C.:SrBrSW, O.:93

Ancestor-Loss-Coefficient:

AVK3: 100
AVK4: 100
AVK5: 96.77

Explanations:

The ancestor-loss-coefficient indicates, how many of the possible ancestors of a dog are present.
Example: Within three generations there are 14 ancestors possible (2 parents + 4 grandparents + 8 great-grandparents),
if one dog appears twice in the ancestor's table we calculate like this:
AVK3 von $13 / 14 * 100 = 92,86$

If an ancestor is not present in our database we assume that this animal is not present otherwise in the table. It is thus calculated in favor of the animal.
